

Idaho Health Screenings & Vaccinations™

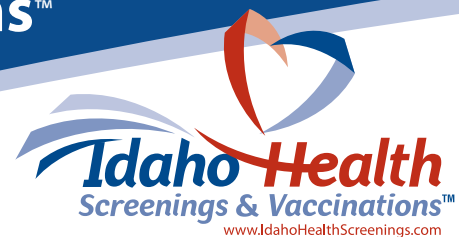

In Partnership with Mountain View Hospital

No Cost To Employer or Employee*

✓ No Co-pay ✓ No Deductible ✓ No Co-Insurance

*PPACA qualified plans

*Billed through Mountain View Hospital

Our mission is to provide insurance-billed, preventative health screenings and vaccinations through on-site clinics.

MEN'S WELLNESS PANEL: Bone Density, Full Cholesterol Panel, Liver Function, TSH, PSA, Diabetes, BMI, Blood Pressure, *CBC, H&P

WOMEN'S WELLNESS PANEL: Bone Density, Full Cholesterol Panel, Liver Function, TSH, Diabetes, BMI, Blood Pressure, *CBC, H&P

BONE DENSITY SCREENING

A Bone Density Screening is the best way to find out how strong or weak your bones are in order to determine your risk for osteoporosis. The GE Achilles Express measures sound waves as they pass through the heel. This test takes about one minute and results are immediate. This device is 98% accurate, approved by the FDA, and commonly used by physicians.

FULL CHOLESTEROL PANEL

An 8-hour fast is preferred. Black coffee, tea, and water are fine to drink. The full cholesterol panel consists of: Total Cholesterol, HDL (good) Cholesterol, LDL (bad) Cholesterol, Triglycerides, TC/HDL Ratio and Glucose. The test consists of a venous blood draw and results are available in approximately two weeks.

LIVER FUNCTION

The Liver Function test screens, detects, evaluates, and monitors for liver inflammation and damage.

THYROID SCREENING (TSH)

The Thyroid Screening measures the Thyroid Stimulating Hormone for hypothyroidism (underactive thyroid) and hyperthyroidism (overactive thyroid). It is important to test your TSH value every 6-12 months if you are taking thyroid medication. The test consists of a venous blood draw and results are available in approximately two weeks. No fasting is necessary.

PROSTATE SCREENING (PSA)

The Prostate Screening measures the Prostate Specific Antigen (PSA) and is one of the best screening tests for the early detection of prostate cancer and other prostate problems. The test consists of a venous blood draw and results are available in approximately two weeks. No fasting is necessary.

DIABETES (GLUCOSE & A1c)

The A1c test calculates your average blood sugar for the past 2-3 months. It allows you to see if you are controlling your blood sugar levels. This is possible because sugar attaches to the hemoglobin in your blood, where it is attached there for the life of the red blood cell - about 3-4 months. The test consists of a venous blood draw and results are available in approximately two weeks. No fasting is necessary.

BODY MASS INDEX (BMI)

The BMI Screening uses a Bioelectrical Impedance Analysis (BIA) to measure the resistance of body tissues to the flow of a small, harmless low-level current. Bioelectrical impedance measures the strength and speed of the electrical current sent through the body. It then uses this measurement and additional data such as height, weight and gender to calculate the percentage of fat tissues out of the whole body mass.

BLOOD PRESSURE

*COMPLETE BLOOD COUNT (CBC)

The Complete Blood Count (CBC) is used as a broad screening test to check for such disorders as anemia, infection, and many other diseases. It is actually a panel of tests that examines different parts of the blood.

HISTORY & PHYSICAL (H&P)

A nurse practitioner will perform a brief history and physical.

INFLUENZA & PNEUMONIA VACCINATIONS

We offer on-site flu and pneumonia shot clinics beginning mid-September through January.

*PPACA qualified plans

*Billed through Mountain View Hospital

Idaho Health Screenings & Vaccinations™ promotes these devices as screening tools. It is important to share your results with your physician and visit your physician for regular medical care.

Mountain View Hospital

Getting you back to what you *Love*

On-site health screenings are Idaho Health Screenings' core business, not a secondary line of business.

Idaho Health Screenings & Vaccinations™ Provides

- Electronic billing of all major insurance including: Blue Cross, Blue Shield, IPN, United Healthcare and more
- Top-notch clinical staff to include: certified phlebotomists, registered nurses, nurse practitioners and dietitians
- Confidential results and screening of patients
- Results for venous blood draw sent to patient within two weeks. Results for bone density screening are immediate
- Aggregate report by site
- Health education materials
- All materials necessary for on-site clinic: consent/insurance forms, promotional flyers and sign-up sheets

Employer Provides

- In order to qualify your insurance plan, we will need to verify benefits. Please provide the following information for EACH type of billed insurance plan:
 - Insurance plan and type (i.e. Blue Cross PPO)
 - Insurance company phone number for *Provider Line* (located on back of insurance card)
 - Employee name
 - Employee date of birth
 - Employee member #
- Completed services agreement
- Tables, chairs, garbage cans, electrical outlet

Patient Provides

- Photo ID
- Insurance card
- Completed consent/insurance form
