

Higher Quality and Lower Cost.
Push play and find out how.

High Quality, Energy Efficient Homes – Faster, Better and Less Expensive.

We build high quality, energy efficient homes using the same building codes and standards as custom homes. However, our construction method is very different. Our homes are system built rather than piece by piece on the jobsite – We build panels and components in a controlled environment with high-tech, automated equipment. We then ship the components to your building lot where the home is assembled. [More...](#)

Customer Quotes

"We found the perfect solution in Zip Kit Homes. I think the quality of our new home exceeds most custom homes. We were amazed at how fast and professional the Zip Kit team was. They did exactly what they promised. In less than 2 months we have an amazing new, energy efficient home."

Caden and Megan Anderson.

"Zip Kit Homes was the perfect solution for our 2nd home in Torrey UT. We decided to go with Zip Kit Homes because winter was coming fast and we needed something that was high quality, built fast and a great design. Zip Kit Homes was exactly that. Their "menu" approach to ordering allowed us to customize the home to fit our style. The home is high quality, was built very fast and the construction team was very professional and easy to work with. I highly recommend them."

Robert Marc and Ann Torrence.

"We love our Zip Kit home! We looked all over for a high quality home that fit our budget and were lucky enough to find this home. The quality and finishes are better than most new custom homes. It is also so energy efficient! I love the design and low monthly heating cost."

Chris and Erin Nester.

"The Zip Kit framing system is great - especially in the winter! It's SO MUCH better than building piece by piece. It's faster, more accurate and you get fewer weather related quality issues."

Ryan Stubbs, Briggs Construction.
