

Teasers

SAP projects are big and costly, right? – Well, they don't have to be.

Let's talk about how we can ensure that your SAP project costs are kept at a minimum.

Looking for a system to control your marketing, sale or service processes?

Then SAP's combined setup of software to a reduced price, and delivery, called Rapid Deployment Service, is your solution.

IT2relate has already delivered this concept in the Nordic; contact us for a discussion of how you can gain and grow from this.

Need something special for your SAP implementation?

Check our packages and contact us for a quote. Remember we have teamed up with an offshore partner, so don't worry about the price...

Relate!

Relate your most important asset, your employees and customers!

Optimize your sales process by bringing your employees and customers closer.

How can we help you relate?

Planning to use new channels for your growing business?

Contact us to discuss integration to twitter, Facebook, Google+ or another social media.

Collaborate!

Optimize your sales projects by enabling tight collaboration between your employees and sales partners.

Ever heard about Streamwork? Streamwork will bring you online collaboration on multiple platforms and directly into SAP CRM... Contact us for more information.

Information to Mycrobust homepage competition

Information provided in the forms at Mycrobust

Title: **Horizontal scrolling homepage**

Subtitle: **Consulting company needing a unique layout**

About Company

IT2relate does consulting and implementation projects within CRM which are the processes around sales, marketing, service, call centers, web shops and more.

Even though such engagements of course need the technical involvement from IT, it for sure also needs the business and in this segment the business consists of extrovert colorful people.

Likes Dislike

The homepage must be different than the competitors and one way of doing that is by having horizontal scrolling with a menu bar on the left (if the design would be better, you can place it on the top). If it can be done in a cool way, then the left menu bar could be a bit to the right of the left border so that the scrolling background is visible.

The scrolling should accelerate and de-accelerate when moving to the part of the homepage that should be displayed. There should not be a scrollbar.

About

On the start page there should be a combined sign up for newsletter and contact form (like here: [applicon\[dot\]dk\[slash\]om-applicon](#)). (Title, first name, last name, e-mail, mobile phone number, checkbox for Newsletter sign up and a free text field).

The homepage must be easy to extend with additional texts.

There should be teasers on the start page that will navigate the user to a place on one of the subpages with more information.

It could be interesting to have flipping boxes like in Window Mobile, where one side of the box has a teaser one-liner and when the mouse hovers over it flips and the solution is on the back and when clicked, the page scrolls to the place with more information. But I do not know how easy that will be to implement with HTML5. Inspire me.

In addition add the content that normally is part of a start page.

You will find logo and teasers as attachments. For additional text use dummy latin.

Interesting homepages for inspiration (do not copy):

<http://www.charliegentle.co.uk/>

<http://www.lomotek.com>

<http://carrotcreative.com>

Additional Comments

The homepage should be compatible with Internet Explorer and Chrome, it should be accessible from Android pads and phones and Apple iPhones and iPads, but I assume that will all automatically be possible when HTML5 is used for the development.

The homepage must be easy to extend with additional menu items / texts.
