### About smaller homes...

Within the last half century, North American homes have more than doubled in size becoming castles to impress by volume alone.

Real estate agents define a home by it square footage, number of bedrooms and bathrooms and pictures of luxuriously furnished formal living and dining rooms that are left unused by its occupants. Due to high building and energy costs, dwindling investments, savings and pensions and an emerging consciousness not to waste and embrace “green concepts”, designing a home is now much less about impressing our neighbors and friends with size and wow factor.

## Cabin Design Section (See top Nav and see Slide 1)

Note on menu structure: There are 3 sections with submenus (Log Plans, Timber Frame, Rustic Inspired). When someone clicks into the section from the top menu, the side menu defaults to Custom Design with Log Home Plans submenu open. If user clicks on one of the other sections with submenus, that submenu opens and the other one closes. If user clicks on a button with no submenu, the submenu that is currently selected remains open. If user clicks on Garages, the “All Plans” submenu item opens, but it does not affect other submenus.

We offer a wide range of log profiles. Whether you like 6x8 or 6x12 'D' , 6x12 Dovetail with a Chink groove or Re-Saw Face, or even 10" rounds, it's your choice! Either way, you get the best logs with structure improving double-tongue & grooves which we tie together in a post and beam or dove tail system. All of our logs are inspected and run through our climate controlled Kiln Dry System before being profiled through our planer.

Log siding is a great way to get an authentic log home look without the log home price tag. Full logs are expensive to buy, harder to install, and require more maintenance over time. Log Siding is very easy to install, produces less wasted materials, and provides a better insulating quality when installed on a conventional built wall—saving you money in the long run as well.

Color Options

## Wood Species

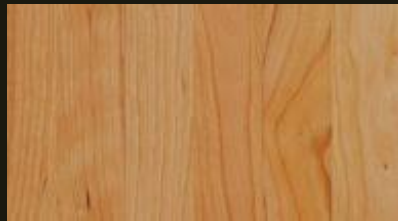

We offer a variety of colors and grain patterns like hickory, pine, cherry, maple... etc

### Hickory

will vary “wildly” in color; ranging from a blond hue to dark brown, with mineral streaks, knots and burls emphasizing the natural growth of the tree. Hickory is generally admired for its dramatic variations in color and grain pattern.

[More](#)

### Cherry

an elegant hardwood, defined by soft grain patterns and rich tonality. In its natural state the specie may exhibit deep reddish-brown heartwood, while having areas that are slightly yellowish, pink, or even gray. These variations will be more visible in product finished in lighter colors.
