Just giving a better explanation as to the metallic printing. It will only be used on some printing.

1) Front of custom hardware it will be a brushed metal tag with 2 colors printed on top 1 metallic or plain color and black to cover any exposed metal not used in design.
2) Some business cards will be printed to match the above tag design either on black plastic or the translucent plastic shown in the video below.

One printer with videos is plasma design http://www.plasmadesign.co.uk/plasticcardmovies.htm

When just printed normally the design should convey the metallic appearance.

In the following designs if they were mine and i was getting them printed i would have:

Blue replaced by metallic ink

purple replaced with metallic ink

Green replaced by metallic ink
