NOTE : LOUVRES CAN BE ROTATED TO ANY POSITION BETWEEN CLOSED AND FULLY ROTATED.

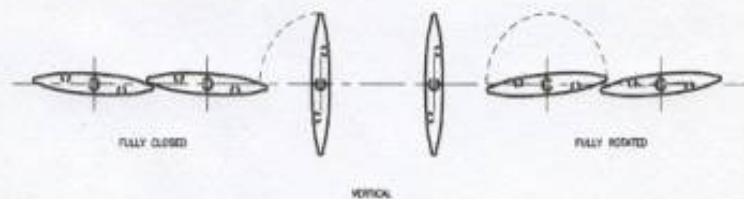

Greater versatility and adjustment can be achieved by using motorised louvres. The 160mm and 200mm Sun Louvres can be mounted horizontally and vertically and be conveniently motor operated via an internal electronic touchpad.

The Sun Louvres are manufactured from a special aluminium alloy extrusion and are either anodised or powder coated for longevity and appearance. The louvres have a nominal thickness of 1.8mm, which is over 4 times thicker than normal roof sheeting.

The unique benefit of the Sun Louvre is the ability to control the sunlight to suit the owner's lifestyle; - as a shading system the Sun louvres rotate through almost 180 degrees to be angled against the sun to allow total control of the summer sun. In winter the louvres can be rotated towards the sun to gain as much winter warm as required. Natural winter sunlight can bath outdoor areas as well as indoor.

Features and Benefits

FEATURE	BENEFIT
OPEN for winter sun	- Allow warmth into rooms for comfort.
OPEN for summer shade	- Shade for comfort and savings on cooling costs.
OPEN for summer shade and ventilation	- Added cooling and greater comfort.
OPEN to reflect light without direct sunlight	- Dark and cold rooms are brought to life with natural light.
Louvres are able to rotate through to approx. 180°	- Complete control is available.
Solid aluminium construction	- Years of trouble free service, protected from hail, debris etc.
Tough powder coated or anodized finishes	- Low maintenance, Colour matched to your personal tastes.
10 Year Guarantee on Louvres	- Peace of mind that you have the best.
Simple 12 volt solar cell & battery or transformer	- Easy to use, safe & uses little or no electricity.
